Through the development of superior technology, products and solutions

– We will contribute to the realization of a society of security, safety and happiness.

In October 2000, Hitachi Kokusai Electric Inc. was formed from the merger of three companies: Kokusai Electric Co., Ltd., Hitachi Denshi, Ltd., and Yagi Antenna Co., Ltd. Since that time, we have focused on using our superior technologies to create new value in two fields: “Video and Wireless Network Solutions”, and “Thin Film Processing Solutions”. In this way, we have contributed to building the foundation of a safe and affluent society.

Then, in June 2018, the business of thin film processing solutions (business related to semiconductor production equipment) was split off, and we have started afresh as a company focusing on video and wireless network solutions.

Currently, efforts related to IoT and digitalization are progressing. Here, all things in the physical space are being connected, and data that has become visible by sensing is being mapped into cyberspace. Such mapping enables the use of AI and big-data analysis. As a result, we can now extract value that was formerly invisible and, by feeding back our findings into the physical space, we can create innovative new value and services, such as improvements in production. In this situation, the new Hitachi Kokusai Electric Inc., will accelerate its shift to the solutions business, responding to the challenges and needs of our customers and society. With our technologies for wireless communications, video surveillance, and image processing at the core, this shift will make the greatest possible use of our experience and knowledge cultivated over many years, and of our cooperative relations with our customers and partner companies. We intend to contribute to the realization of Society 5.0 and super-smart societies.

We have revised the formulation of our group identity to the above title. We should be proud of our group identity, and through monozukuri we should improve the relationship of trust with our customers and partner companies, and contribute to realization of an affluent society. Going forward, you can expect great things from the new Hitachi Kokusai Electric Inc.

MONOZUKURI* for a society of security, safety and happiness

– Applying advanced technologies for Video, Wireless Communication, broadcast and transmitter Technologies

The Hitachi Kokusai Electric Group pursues “MONOZUKURI” and provides true value to help resolve social issues, including taking measures to assure safety and security, protect the environment, and combat global warming through use of our video and wireless systems technology, and by upgrading and integrating those systems. Hitachi Kokusai Electric will continue contributing to society and shall grow by providing products and services in which the emphasis is on safety, quality and the environmental soundness.

*MONOZUKURI is defined as all creative activities carried out by the Hitachi Kokusai Electric Group, including the development and provision of products and services, among others.
The Security, Safety and Convenience of Society
– Hitachi Kokusai Electric supports your daily life and systems of society.

Our products and systems play active roles in various scenes of our daily life and in society. Most of our products and systems support the social infrastructure and are largely invisible to the general public. Here, you can see how the Hitachi Kokusai Electric Group’s products and systems are used in our lives and for society.
**Video and Communication Solutions**

We will contribute to social innovation by integrating our technologies of Video and wireless systems.

We will provide wide-ranging communication systems that integrate our technologies of video and wireless network communication systems, including administrative disaster prevention radio systems, various types of industrial-use radio communication systems, high-speed point-to-point wireless bridge, mobile phone base station equipment, and wireless packet communication devices.

In the area of Information solutions, our multimedia information display systems that correctly and quickly communicate stock prices and other information, and our application packages for financial companies that multilaterally analyze sales and customer information are contributing to society.

In broadcasting scenes, total support is being provided through studio cameras, transponders, transmitters, tapeless systems, and transmission/reception antennas. We also provide systems for monitoring roads, tunnels, rivers, railroads, and bridges, leveraging our broadcasting camera technology. Our video cameras for industries are also contributing significantly to factory automation, the medical field, and such areas as bioindustry.

**Research & Development**

Development sections creating cutting-edge technologies in the next era

Hitachi Kokusai Electric’s cutting-edge technologies include technology for radio that enables faster human voice and data communications in a more realistic manner, cameras that monitor suspicious-looking persons, and broadcasting systems that offer higher definition images to households among the most advanced in the world.

We enhance and combine such technologies and its know-how to create new value, such as in the form of fire-fighting and emergency care systems that protect the security of communities, systems provide a safe transportation and safe facility utilization, and systems for instantaneous communicating information to communities.

We will continue creating new value in order to serve as a compass for finding the proper direction toward realizing new innovations in the next era.

**Addressing CSR**

We will strive to create a sustainable society of security, safety and happiness and push the boundaries of tomorrow.

We consider our CSR (Corporate Social Responsibility) to be earning the confidence and meeting expectations of society through all our business activities. Based on our vision, we will develop superior technology, products and solutions, and demonstrate excellent teamwork to pave the way for a prosperous and sustainable future to help solve problems faced by society. We will respect the diversity of human resources and ensure that our workplaces have vigor, openness and cheerfulness while complying with laws and ethical rules, thereby creating a corporate culture of integrity to be respected by society. For this end, we disclose information in a fair and transparent manner to discuss the future of MONOZUKURI.

**Connection with society**

The products and services provided by us have been evolving in response to an ever-changing society. In order for further provision of them, we watch the present and future of the global and local communities, heighten the sensitivity, think deeply, and positively make opportunities to meet with many people to discuss the future of MONOZUKURI.

**Relationship with the environment**

We are attempting to reduce waste, restrict energy consumption, and manage chemical substances by setting targets to lower the environmental impact. Based on each target, we proceed with each step through the procurement of materials, product manufacturing processes, use and disposition of products by our customers, and periodically publicize the results of our efforts.

For details regarding our approach to CSR and addressing social and environmental issues, please visit our Website below (entitled “CSR Information”).

History

Hitachi Kokusai Electric

2018 - created the thin-film process solutions business.

2015 - Supplied train radio communication systems and surveillance camera systems to Sendai city subway Tozai Line.

- Supplied an in-vehicle radio equipment with FOMA® wireless packet communication unit to NTT Docomo.
- Supplied ETC antenna and equipment for tollgates to Tomei Expressway, Nippon Highway Corporation, etc.

2014 - Received a package order for digital terrestrial television system equipment from the Development Award by the Institute of Telematics Engineers.

1973 - Developed the “Hitachi Denshi radio device” to practical use in cooperation with Tohoku Electric Power Co., Inc. etc.

1964 - Received a VHF for the Tokyo Olympics as an exclusive supply with our TV camera and transmission equipment also serving active roles.

1954 - Completed a 50-kW, 4-stage, super-tetrode amplifier— the first of its kind made in Japan.

1948 - Kokusai Electric

1949 - Hitachi Kokusai Electric

- Founded the company.

1952 - Yagi Antenna

- Completed an unmanned relay station on Sobetsu Line.

1956 - Completed an unmanned relay station on Sobetsu Line.

1957 - Supplied an analog computer to the Development Award by the Institute of Telematics Engineers.

1963 - Supplied Japan’s first train guiding radio equipment to Hanshin Electric Railway Co., Ltd.

1964 - Hitachi Denshi

1973 - Hitachi Kokusai Electric

- Supplied EVC antenna and equipment for relay stations to Tohoku Expressway, Tohoku Electric Railway Co., Ltd. and others.

1979 - Delivered a car phone base station.

1978 - Released a home-use video cameras.

- Released a solid-state drive—the first of its kind made in Japan.

1983 - Developed the first purely Japanese-made diffusion furnace.

1957 - Supplied radio equipment for the “Sagasa” Antarctic research vessel of the Japan Coast Guard.

1958 - Supplied Japan’s first train guiding radio device to Hanshin Electric Railway Co., Ltd.

1991 - Put a “single-frequency simultaneous bidirectional radio device” to practical use in cooperation with Tohoku Electric Power Co., Ltd. etc.

1994 - Supplied VTRs for the Tokyo Olympics as an exclusive supply with our TV camera and transmission equipment also serving active roles.

1997 - Hitachi Denshi

1993 - Hitachi Kokusai Electric

- Supplied the first VTR for the Tokyo Olympic as an exclusive supply with our TV camera and transmission equipment also serving active roles.

2000 - Hitachi Kokusai Electric

1998 - Hitachi Kokusai Electric

2004 - Hitachi Kokusai Yagi Solutions

2007 - Hitachi Kokusai Electric

- Supplied the second generation of “Pocket Bells (pocket pagers)” to the Fire and Disaster Management Agency.

2013 - Hitachi Kokusai Yagi Solutions

- Supplied a checkerboard to “Tosho (TSE) Arrows”.

- Supplied a car telephone base station.

- Supplied train radio communication systems and surveillance camera systems to Sendai city subway Tozai Line.
