(2) Gigabit Ethernet interface

High-speed serial interface Gigabit Ethernet is supported and direct connection is possible to PC by the diameter cable of thin as compared with parallel output. Cable length can be extended to maximum 100m without hub and switcher.

(3) GigE Vision (Ver 1.00) correspondence

Based on Industrial camera interface standard GigE Vision, a maximum of 1Gbps high speed data transmit is available and suitable for image processing.

(4) GENiCAM (Ver 1.00) correspondence

Development of camera control system is easy because industrial camera control API "GENiCAM" lead EMVA (European Machine Vision Association).

7. Timing chart

7-1. Normal mode

- (*1) 0.22us to 13.1ms Approx. 3.2us/step

Note: Frame rate can be calculated from following equations using width of picture grabbing.

Total line = 19 + Width + (775 - Width) / 10 ... omit the figures after the decimal fractions

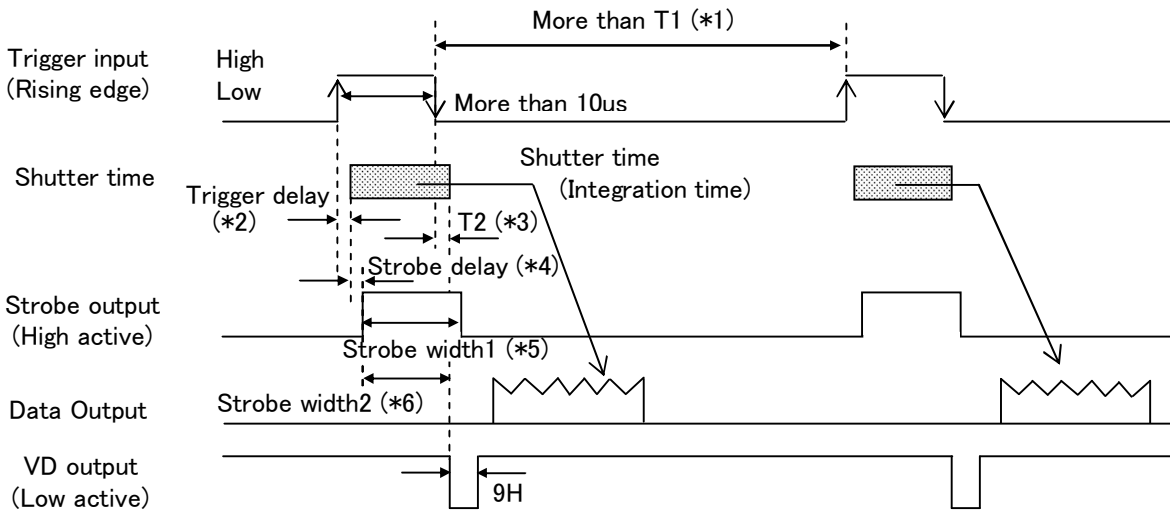

Frame rate = (37000000 / 1270) / Total line

7-4. Reset control mode

(1) When Fixed shutter

(2) When ONE Trigger

Special function of reset control mode

The camera shifts to the output of a normal mode (continuous output) when Trigger input signal passes about 1/3 second in the state of High.

It returns to the Trigger mode if Trigger input signal becomes Low.

However, after becoming Low Trigger input, the period of 50ms becomes a Trigger signal input prohibition period.

7-5. VD reset mode

NOTE: If the external VD of cycle which does not match the camera operation mode is input, shutter time has an error.

8. Input/Output signal

The level of the trigger signal input to the camera is as follows.

- High level : +5.0 to +24V
- Low level : 0 to +0.3V
- Threshold : 3.7V +/- 0.5V (Low --> High)
3.3V +/- 0.5V (High --> Low)

(2) Output signal
